Exercise 1 – HTML

Create a site with 4 pages

The first page should be called countries.html and has the following features:

- The <title> should be "Countries of the World";
- The main title should be "Countries of the World";
- On the top of the page there should be a list with the name of 3 countries chosen by you;
- Create a "section" for each country divided by a horizontal line;
- Each section has a title (the name of the country), a flag (an image) and some text (some paragraphs) with generic information about the country;
- Each flag has a link that allows the user to access a separate page/file about the corresponding country – the name of that page/file should be the name of the country – for example for Spain, the name should be spain.html.

On the page for each country there should be the following content:

- The <title> should be the name of the country;
- The main title should be the name of the country;
- Big flag;
- Generic information about the country (1 or 2 paragraphs) with a title "Information";
- A section with a summary of the history of the country (1 or 2 paragraphs) a title "History";
- Some photographs with a legend;
- A link at the end that allows the user to go back to the main page (countries.html);

All the images should have an accessibility attribute with the corresponding description.

When you put the cursor on top of an image, a tooltip should appear with the description of the image.

You can use Wikipedia to get the text and the images.
